

<b>Word</b>	<b>Definition</b>	<b>Group #</b>
<b>BPM</b>	Tempo markings are indicated in Beats Per Minute.	1
<b>Form</b>	refers to the overall structure or plan of a piece of music,[1] and it describes the layout of a composition as divided into sections. ( <a href="https://en.wikipedia.org/wiki/Musical_form">https://en.wikipedia.org/wiki/Musical_form</a> )	1
<b>Half Step</b>	Synonym for Semitone	1
<b>instrumentation</b>	The variety and/or combinations of instruments used to perform a piece.	1
<b>Interval</b>	The distance between two notes. In western music the distance is measured by semitones.	1
<b>Major Key</b>	A tonal or harmonic center emphasized from the third scale degree being one wholestep (two semitones) above the second.	1
<b>Minor Key</b>	A tonal or harmonic center emphasized from the third scale degree being one semitone above the second.	1
<b>Octave</b>	a series of eight notes occupying the interval between (and including) two notes, one having twice or half the frequency of vibration of the other. ( )	1
<b>Pitch</b>	the quality of a sound governed by the rate of vibrations producing it; the degree of highness or lowness of a tone.	1
<b>Rhythm</b>	the systematic arrangement of musical sounds, principally according to duration and periodic stress.	1
<b>Semitone</b>	In Western Music, the smallest distance between two notes. one twelfth of an octave.	1
<b>Tempo</b>	the speed at which a passage of music is or should be played. Usually measured in beats per minute.	1
<b>Timbre</b>	The qualities of a sound that allow the listener to differentiate it from others. The unique tone or color of a sound.	1
<b>Triad</b>	In western music, a set of three notes where each is a third away from the next.	1
<b>Whole Step</b>	Musical Interval comprised of two semi-tones. Also called a whole tone. The difference in pitch that is equal to one sixth of an octave. ( <a href="http://www.merriam-webster.com/dictionary/whole%20step">http://www.merriam-webster.com/dictionary/whole%20step</a> )	1
<b>Harmony</b>	the combination of simultaneous musical notes or frequencies.	1
<b>Chromatic Scale</b>	A scale of twelve notes(ascending or descending), each a semitone away from the next.	1
<b>Rest</b>	Notated silence in sheet music.	1
<b>Whole Tone Scale</b>	Scale made of six notes each a whole step away from next. (only 2 exist)	1
<b>Attack</b>	The first part of a sound envelope consisting of the amount of time it takes the sound to reach its peak volume from the time the key is pressed.	2

<b>MIDI</b>	An acronym for "Musical Instrument Digital Interface." A protocol that allows the transfer and manipulation of musical data parameters among different capable devices. Some of these parameters include: velocity, pitch, tempo, panning, vibrato, and many more.	2
<b>MIDI controller</b>	Hardware that can send and manipulate MIDI parameters of a performance by means of a physical keys, knobs, sliders, and other input methods.	2
<b>ADC</b>	Analog to Digital Converter	2
<b>Audio Interface</b>	Hardware that converts a signal from analog to digital and digital to analog and transfers this digital information between a computer and the analog endpoint(s).	2
<b>Bounce</b>	In digital, a verb meaning to combine audio from different tracks into one.	2
<b>Bit</b>	A bit is the basic unit of information in computing and digital communications.[1] A bit can have only one of two values, and may therefore be physically implemented with a two-state device. These values are most commonly represented as either a 0 or 1.	2
<b>Bit Depth</b>	a certain value set for describing the resolution of the sound data (samples) that is to be captured and stored in an audio file. ( <a href="http://mp3.about.com/od/glossary/g/Bit-Depth-Definition-What-Does-Bit-Depth-Mean.htm">http://mp3.about.com/od/glossary/g/Bit-Depth-Definition-What-Does-Bit-Depth-Mean.htm</a> )	2
<b>Bit Rate</b>	1. In digital audio, a synonym for bit depth. 2. Describes the rate of data transfer	2
<b>DAC</b>	Digital to Analog Converter	2
<b>Decay</b>	How quickly the sound drops to the sustain level after the initial peak. ( <a href="http://en.wikiaudio.org/ADSR_envelope#Decay">http://en.wikiaudio.org/ADSR_envelope#Decay</a> )	2
<b>Delay</b>	An audio effect which records an input signal to an audio storage medium, and then plays it back after a period of time.[2] The delayed signal may either be played back multiple times, or played back into the recording again, to create the sound of a repeating, decaying echo. [ <a href="https://en.wikipedia.org/wiki/Delay_(audio_effect)">https://en.wikipedia.org/wiki/Delay_(audio_effect)</a> ]	2
<b>Envelope</b>	This is made up of the attack, decay, sustain, and release of a sound. Especially in electronic sound design and synthesis.	2
<b>LFO</b>	Low frequency oscillator	2
<b>Oscillator</b>	In synthesizers, oscillators produce the original sound, which is then fed through the rest of the signal path. ( <a href="http://www.innovativesynthesis.com/basic-synthesis-part-1-%E2%80%93-oscillators/">http://www.innovativesynthesis.com/basic-synthesis-part-1-%E2%80%93-oscillators/</a> )	2
<b>Pop Filter</b>	They reduce or eliminate sounds caused by the mechanical impact of fast moving air on the microphone during recorded speech and singing.	2
<b>Phantom Power</b>	is a means of distributing a DC current through audio cables to provide power for microphones and other equipment. The supplied voltage is usually between 12 and 48 Volts, with 48V being the most common. ( <a href="http://www.mediacollege.com/audio/phantom-power/">http://www.mediacollege.com/audio/phantom-power/</a> )	2
<b>Release</b>	The time it takes for a sound to fade after the key or input device is released. It is part of the sound envelope.	2

<b>Sample Rate</b>	the number of samples of a sound that are taken per second to represent the event digitally. ( <a href="http://whatis.techtarget.com/definition/sample-rate">http://whatis.techtarget.com/definition/sample-rate</a> )	2
<b>Signal Processing</b>	the intentional alteration of auditory signals, or sound, often through an audio effect or effects unit. As audio signals may be electronically represented in either digital or analog format, signal processing may occur in either domain. ( <a href="https://en.wikipedia.org/wiki/Audio_signal_processing">https://en.wikipedia.org/wiki/Audio_signal_processing</a> )	2
<b>Sustain</b>	The part of a sound envelope that begins when the attack and decay portions have run their course, and continues until the key is released. The sustain control is used to determine the level at which the envelope will remain. While the attack, decay, and release controls are rate or time controls, the sustain control is a level control. ( <a href="https://en.wikipedia.org/wiki/Sustain">https://en.wikipedia.org/wiki/Sustain</a> )	2
<b>Synthesizer</b>	an electronic musical instrument, typically operated by a keyboard, producing a wide variety of sounds by generating and combining signals of different frequencies.	2
<b>Track</b>	an audio signal communications channel in a storage device	2
<b>Tremelo</b>	A wavering effect in a musical tone, typically produced by rapid reiteration of a note.	2
<b>TRS cable</b>	TRS cables have two conductors plus a ground (shield). They are commonly used to connect balanced equipment	2
<b>XLR cable</b>	is a style of electrical connector, primarily found on professional audio, video, and stage lighting equipment. The connectors are circular in design and have between 3 and 7 pins. They are most commonly associated with balanced audio interconnection. ( <a href="https://en.wikipedia.org/wiki/XLR_connector">https://en.wikipedia.org/wiki/XLR_connector</a> )	2
<b>Bidirectional</b>	Are microphones that pick up sound well, or with high sensitivity, from the front and back but poorly, or with low sensitivity, from the sides. ( <a href="http://www.learningaboutelectronics.com/Articles/What-are-bidirectional-microphones">http://www.learningaboutelectronics.com/Articles/What-are-bidirectional-microphones</a> )	3
<b>Condensor Microphone</b>	A microphone that uses a capacitor to convert the compression and rarefaction of sound waves into electrical energy. Condenser microphones require power (voltage) in order to operate. This voltage is know throughout the recording industry as “phantom power.” ( <a href="http://bluemic.com/blog/2010/05/condenser_microphone/">http://bluemic.com/blog/2010/05/condenser_microphone/</a> )	3
<b>Chorus</b>	An audio effect where incoming audio is split and run through a SHORT delay and then mixed/blended with the original audio. The short delay time still resembles one sound rather than an echo.	3
<b>Compression</b>	Compression is the process of lessening the dynamic range between the loudest and quietest parts of an audio signal. ( <a href="http://music.tutsplus.com/tutorials/the-beginners-guide-to-compression--audio-953">http://music.tutsplus.com/tutorials/the-beginners-guide-to-compression--audio-953</a> )	3
<b>Decibel</b>	The unit used to measure the intensity of a sound or generally a degree of loudness. ( <a href="http://science.howstuffworks.com/question124.htm">http://science.howstuffworks.com/question124.htm</a> )	3
<b>Dynamic Microphone</b>	It uses a wire coil and magnet to create the audio signal. Generally dynamic mics are more durable and have a more limited frequency response then condenser microphones. They also do not require their own power supply.	3

<b>EQ</b>	Equalization, or EQ for short, means boosting or reducing (attenuating) the levels of different frequencies in a signal. The most basic type of equalization familiar to most people is the treble/bass control on homeaudio equipment. ( <a href="http://www.mediacollege.com/audio/eq/">http://www.mediacollege.com/audio/eq/</a> )	3
<b>Filter</b>	a frequency dependent amplifier, an audio filter is designed to amplify, pass or attenuate (negative amplification) some frequency ranges. ( <a href="https://en.wikipedia.org/wiki/Audio_filter">https://en.wikipedia.org/wiki/Audio_filter</a> )	3
<b>Metronome</b>	A device that produces sounds at regular mathmatically precise intervals determined by the operator.	3
<b>Limiter</b>	type of compressor designed for a specific purpose — to limit the level of a signal to a certain threshold. Whereas a compressor will begin smoothly reducing the gain above the threshold, a limiter will almost completely prevent any additional gain above the threshold. ( <a href="http://www.mediacollege.com/audio/processing/limiter/">http://www.mediacollege.com/audio/processing/limiter/</a> )	3
<b>Mastering</b>	A form of audio post-production, is the process of preparing and transferring recorded audio from a source containing the final mix to a data storage device (the master); the source from which all copies will be produced. ( <a href="https://en.wikipedia.org/wiki/Audio_mastering">https://en.wikipedia.org/wiki/Audio_mastering</a> )	3
<b>Mixing</b>	The process by which multiple sounds are combined into one or more channels. In the process, the source signals' level, frequency content, dynamics, and panoramic position are manipulated and effects may be added. ( <a href="https://en.wikipedia.org/wiki/Audio_mixing">https://en.wikipedia.org/wiki/Audio_mixing</a> )	3
<b>Phaser</b>	An electronic sound processor used to filter a signal by creating a series of peaks and troughs in the frequency spectrum. The position of the peaks and troughs of the waveform being affected is typically modulated so that they vary over time, creating a sweeping effect. [ <a href="https://en.wikipedia.org/wiki/Phaser_(effect)">https://en.wikipedia.org/wiki/Phaser_(effect)</a> ]	3
<b>Plug in</b>	Plugins add or enhance audio-related functionality in a computer program. Such functionality may include digital signal processing or sound synthesis. ( <a href="https://en.wikipedia.org/wiki/Audio_plugin">https://en.wikipedia.org/wiki/Audio_plugin</a> )	3
<b>Quantize</b>	The process of adjusting when the beginning of a musical event (or multiple events) takes place by moving each event instance to its closest mathimatically predetermined grid location.	3
<b>Reverb</b>	Reverberation, or reverb, is a series of acoustic reflections that occur within a space when sound is created. The timing, frequency, and volume of the reflections will vary depending on the size, shape, and contents of the space. Whether natural or artificial, reverberation provides depth to a recording and provides the listener with subconscious clues about the environment where the performance took place, or is being represented as taking place. Reverb should be used carefully, however, because excessive reverb can result in muddy or unintelligible recordings.	3
<b>Sequencer</b>	a device or application software that can record, edit, or play back music, by handling note and performance information in several forms, typically CV/Gate, MIDI, or Open Sound Control (OSC), and possibly audio and automation data for DAWs and plug-ins.	3
<b>Omnidirectional</b>	A microphone with area of response that is generally considered to be a perfect sphere in three dimensions.	3

<b>Unidirectional Microphone</b>	Picks up sound predominantly from one direction.	3
